EpiFix®

Treatment for Foot Ulcers

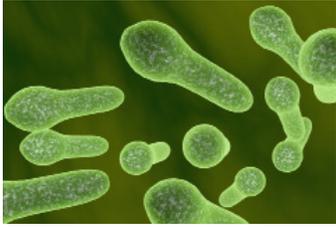

A primary concern for **diabetic individuals** is the development of foot ulcers. Ulcers (breakdown of skin and soft tissues) can potentially lead to gangrene (tissue death). At present, gangrene has no cure and dead tissue cannot be revived. Perhaps even more concerning, though, is the fact that gangrene will continue to spread unless the affected tissue is removed. This means, unfortunately, that amputation sometimes becomes necessary.

Foot ulcers are actually the primary cause of amputations for diabetic individuals. Naturally, we do not want any of our patients to lose a limb, so we are pleased to offer EpiFix® to treat your wound.

This particular treatment option has been developed from amniotic membrane and delivers various growth factors, cytokines, extracellular matrix proteins, and other proteins that help to regenerate soft tissue. Put more simply, the treatment capitalizes on natural materials found in the placenta that enables damaged tissues to repair faster than they otherwise would be able to.

Some of advantages to EpiFix® include:

1. Advanced healing. Being able to heal a foot ulcer more quickly not only reduces the risk of greater tissue damage, but also decreases the odds of a potentially dangerous infection that could lead to gangrene.

2. Modulated inflammation levels. Inflammation can be instrumental in the natural healing process, but can also create additional issues when it happens in excess. This ulcer treatment option helps to control inflammation and keep the situation more manageable.

3. Reduced scar tissue development. Scar tissue doesn't have the flexibility provided by natural skin tissue. For otherwise healthy people, scars are not particularly concerning, but it could possibly become an issue for those with diabetes.

At Capital District Podiatry, we are firmly committed to providing exceptional diabetic foot care services for you and your loved ones. Diabetes has wide-ranging effects throughout the entire body, but feet can be particularly at risk when you do not have an experienced, skilled allies like our staff. If you or a family member is living with this condition, let us help you with all foot care issues, both corrective and preventative.

For more information, give us a call at [\(518\) 273-0053](tel:5182730053).

A Commitment to Continued Education and Providing the Best of Care

Tejas Pandya, DPM recently attended the renowned DERMfoot convention held on April 16 – 17. This annual event features numerous exhibits and lectures that provide the latest education on foot and ankle skin and nail diseases, as well as state-of-the-art technologies and cutting-edge diagnostics used to treat conditions and provide patients with the highest quality of care.

It is our goal to stay atop of these industry advancements so that we can continue to give our patients the best care possible!
